## Abstracts

According to our (Global Info Research) latest study, the global Interactive Voice Response (IVR) market size was valued at USD 4481.8 million in 2023 and is forecast to a readjusted size of USD 6176.9 million by 2030 with a CAGR of 4.7% during review period.

Interactive voice response (IVR) is a technology that allows a computer to interact with humans through the use of voice and DTMF tones input via a keypad. In telecommunications, IVR allows customers to interact with a company's host system via a telephone keypad or by speech recognition, after which services can be inquired about through the IVR dialogue. IVR systems can respond with pre-recorded or dynamically generated audio to further direct users on how to proceed. IVR systems deployed in the network are sized to handle large call volumes and also used for outbound calling, as IVR systems are more intelligent than many predictive dialer systems.

North America contributed significantly to the growth of the overall interactive voice response market in 2017. However, the IVR market in Asia Pacific (APAC) is expected to grow at the highest CAGR during the forecast period owing to the rising number of new small and medium enterprises (SMEs) and large enterprises in this region. The presence of a huge end-user base in advanced economies such as Japan and South Korea, and the growing demand for enhanced customer service and a higher level of customer interaction is also expected to fuel the growth of the IVR market in this region.
