Abstracts

The Interceptor Missile is an anti- ballistic missile designed to counter the ballistic missile like intermediate range and intercontinental ballistic missiles launched from any country.

According to our (Global Info Research) latest study, the global Interceptor Missiles market size was valued at USD 9368.7 million in 2022 and is forecast to a readjusted size of USD 11270 million by 2029 with a CAGR of 2.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In three ways an Interceptor Missile works: a “hit-to-kill” device i.e. at an incredibly high speed, an interceptor runs into the incoming projectile, it contains a device that is warhead with a directed fragmentation explosive and combination of both as mentioned. For example the AEGIS BMD is a pure “hit-to-kill” an Israeli Arrow missile which uses an explosive warhead while the modern Patriot missiles use a “hit-to-kill” vehicle with a small explosive warhead to amplify the damage.
