## Abstracts

An interchangeable biosimilar is a biopharmaceutical product that is similar to an approved reference biologic and has demonstrated equivalence in terms of quality, efficacy and safety. Interchangeable biosimilars may have minor differences in composition, quality, purity and biological activity compared to the reference biological drug, but these differences do not affect their efficacy or safety. Interchangeable biosimilars are generally considered to be effective alternatives to reference biologics and can be used interchangeably in clinical practice. These generics are often cheaper, thus providing patients with more therapeutic options.

According to our (Global Info Research) latest study, the global Interchangeable Biosimilars market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
