According to our (Global Info Research) latest study, the global Interferometer market size was valued at USD 702.7 million in 2023 and is forecast to a readjusted size of USD 1072 million by 2030 with a CAGR of 6.2% during review period.

Interferometers are investigative tools used in many fields of science and engineering. They are called interferometers because they work by merging two or more sources of light to create an interference pattern, which can be measured and analyzed; hence 'Interfere-ometer'. The interference patterns generated by interferometers contain information about the object or phenomenon being studied. They are often used to make very small measurements that are not achievable any other way.

Interferometer industry is relatively concentrated, manufacturers are mostly in the United States and Europe regions. Among them, United States Production value accounted for more than 36% of the total value of global Interferometer in 2019.
