Abstracts

The global Interior Laminate market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Technological trends in the interior laminate market will mainly be reflected in the environmental friendliness of materials, fire resistance and surface treatment technology. For example, with the increasing awareness of environmental protection, interior laminates will increasingly focus on the use of green raw materials and production processes. In addition, with the increasing awareness of fire safety, the fire resistance of interior laminates will be more comprehensively improved. At the same time, innovations in surface treatment technology will lead to a greater variety of textures and colours for interior laminates to meet the needs of different users.

Interior Grade Laminate is a type of laminated material that is designed for use in interior applications, such as furniture, cabinets, countertops, and wall panels. It is made by bonding multiple layers of paper or fabric together with a resin adhesive under high pressure and temperature, resulting in a durable, decorative, and easy-to-clean surface.
