Abstracts

According to our (Global Info Research) latest study, the global Interlocking Mining Cable Hooks market size was valued at US\$ 194 million in 2025 and is forecast to a readjusted size of US\$ 285 million by 2032 with a CAGR of 5.7% during review period.

Interlocking mining cable hooks are safety accessories designed for installation on roof bolts, wire ropes, mesh, sidewall supports, or dedicated guide rails in underground roadways. They serve to support, separate, and secure various types of cables—including power, control, communication, and leaky coaxial cables—thereby minimizing issues such as sagging, friction, crushing, immersion in accumulated water, and mechanical damage. These hooks are primarily utilized in underground coal mines, underground metal and non-metal mines, and tunnel engineering projects, specifically within main roadways, mining district roadways, transport roadways, substation chambers, and communication systems. The upstream supply chain encompasses PVC, nylon, flame-retardant and anti-static modified materials, steel wire and plate, galvanizing and plastic coating materials, webbing, fasteners, and molds. The midstream sector involves processes such as injection molding, wire bending, stamping and welding, galvanizing or coating, and final assembly, alongside testing for flame retardancy, surface resistance, load-bearing capacity, and corrosion resistance. The downstream market consists of coal mining enterprises, metal mining companies, and mine construction firms.
