Abstracts

According to our (Global Info Research) latest study, the global Intermodal Freight Transportation market size was valued at USD 23890 million in 2023 and is forecast to a readjusted size of USD 43400 million by 2030 with a CAGR of 8.9% during review period.

Intermodal freight transport involves the transportation of freight in an intermodal container or vehicle, using multiple modes of transportation (e.g., rail, ship, and truck), without any handling of the freight itself when changing modes. The method reduces cargo handling, and so improves security, reduces damage and loss, and allows freight to be transported faster. Reduced costs over road trucking is the key benefit for inter-continental use. This may be offset by reduced timings for road transport over shorter distances

In 2017, North America held the largest share of the Intermodal Freight Transportation market owing to increase in transportation by railroad which is the most convenient mode of intermodal transport for freight .The U.S is the largest contributor in this regional market.
