Abstracts

The global Intermodal Transportation Service market size is expected to reach \$ 109900 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Intermodal transportation services refer to logistics services in which goods are transported using two or more modes of transport—such as truck, rail, and ocean—under a single contract or coordinated logistics arrangement, without handling the cargo itself when changing transport modes. By combining the efficiency and cost advantages of different transport modes, intermodal services enable efficient, reliable, and lower-carbon transportation for bulk and long-distance shipments, and are widely used in industrial, consumer goods, and cross-regional logistics.

From a global perspective, demand for intermodal transportation services continues to grow, driven by expanding cross-regional trade, the need for logistics cost optimization, and policies promoting carbon reduction and sustainable transport. North America and Europe are mature markets with well-established truck–rail intermodal networks and standardized, large-scale operations, while the Asia-Pacific region shows the fastest growth supported by manufacturing concentration, cross-border e-commerce, and improving port and hub capabilities. Overall, the market is evolving toward digitalized scheduling, network-based operations, and lower-carbon transportation models.
