According to our (Global Info Research) latest study, the global Internal Heated Fluidized Bed Dryer market size was valued at US\$ 676 million in 2024 and is forecast to a readjusted size of USD 839 million by 2031 with a CAGR of 3.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Internally heated fluidized bed dryer is a typical energy-saving fluidized bed dryer, which is an organic combination of horizontal multi-chamber fluidized bed drying technology and conduction heat exchange drying technology. A high heat exchange efficiency internal heat exchanger is set in the drying chamber of the fluidized bed. The internal heat exchanger is immersed in the material in a fluidized state. The heat required for water evaporation is provided by the internal heat exchanger and hot air, so the drying intensity and thermal efficiency are greatly improved. The bed area of the internally heated fluidized bed dryer is only about 1/2 of that of the conventional fluidized bed dryer, the required amount of hot air is greatly reduced, and the power consumption and tail gas heat loss are greatly reduced.
