Neuromodulation is used to regulate functions of nervous system, such as therapeutic alteration, inhibition, stimulation, modification, and others. There are two types of neuromodulation external neuromodulation and internal neuromodulation. Internal neuromodulation block or repair neuron signals of pain from reaching the brain using electrical impulses. These devices reduce highest levels of pain for various chronic or refractory diseases. Its clinical significance in pain reduction and therapeutics has lead a wide acceptance in the North American region.
