Abstracts

Internal rotor motors have great ability to dissipate heat. This explains why the overwhelming majority of BLDC (brushless DC) motors use an inner rotor design—it's a very commonly-used motor topology. Heat directly impacts the motor's ability to generate torque, so better heat dissipation improves efficiency. Another benefit of the internal rotor motor lies in the small moment of inertia (tendency to resist angular acceleration) of the rotating shaft. This quality gives this type of electric motor an incredible ability to run at high speeds.

This report studies the global Internal Rotor Motors production, demand, key manufacturers, and key regions.
