Abstracts

The global International Car Rental market size is expected to reach \$ 43865 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

International car rental services refer to short-term vehicle rental services provided to consumers across national borders by professional rental companies or platforms. Users typically book through online or offline channels in their country of departure and pick up and drive the rental vehicle at designated locations in the foreign destination country, returning it according to the agreement once the rental period is over. The core of the service lies in providing vehicles that comply with local legal requirements and assisting users with international driving license verification, cross-border insurance, and adaptation to traffic rules in different countries to meet their needs for mobility and flexibility abroad.

The international car rental market has broad prospects, mainly benefiting from the strong recovery of global tourism, increasingly frequent cross-border business exchanges, and the growing trend of independent travel and in-depth tours. Market growth will be closely linked with technological innovation, such as simplifying the booking process through digital platforms, promoting electronic driving license verification, and accelerating the cross-border deployment of electric vehicle fleets to meet global sustainability goals. At the same time, providing seamless Chinese-language services, transparent full insurance coverage, and intelligent navigation solutions will be key competitive advantages for service providers to attract the rapidly growing Chinese and Asian outbound traveler segments.
