Abstracts

According to our (Global Info Research) latest study, the global Internet Data Center Connectors market size was valued at US\$ 3733 million in 2025 and is forecast to a readjusted size of US\$ 7816 million by 2032 with a CAGR of 11.3% during review period.

Internet Data Center (IDC) connectors are core electronic components used to connect various electronic devices (such as servers, switches, storage devices, etc.) within IDC scenarios to achieve high-speed data signal transmission, stable power supply, and physical connection between devices. They are key basic components to ensure the efficient operation and computing power output of IDCs. In 2024, global Internet Data Center Connectors production reached approximately 1195 million units, with an average global market price of around US\$ 2.49 per unit.

Upstream Analysis

Upstream: Primarily includes suppliers of high-performance copper materials, insulating materials, precision molds, and electroplating technologies. High-performance copper materials serve as critical raw materials for copper cable connectors, with their quality and performance directly impacting the connectors' electrical conductivity and signal transmission quality. Insulating materials are used to isolate different electrical components, ensuring stable signal transmission. Precision molds and electroplating technologies are employed in the manufacturing process to guarantee connector precision and reliability.

Downstream: Primarily involves data center operators, communication equipment

manufacturers, and smart computing platform developers. Data center operators require connectors to build network architectures and connect equipment. Communication equipment manufacturers use connectors for internal and external signal transmission when producing servers, switches, and other devices. Smart computing platform developers integrate connectors into comprehensive solutions to meet data transmission demands for applications like artificial intelligence and high-performance computing.

Development Trends

High-Speed Evolution: As data center bandwidth demands escalate, connector transmission rates continue advancing from 56Gbps SFP28/SFP56 to 112Gbps and 224Gbps QSFP-DD. Future developments will pursue even higher speeds to support ultra-high-speed connectivity like 1.6T networks.

Miniaturization and High Density: Limited data center space necessitates connectors with smaller dimensions and higher port densities to enable more compact layouts and increased connection points.

Integration with Optical Communication Technologies: While copper connectors excel in short-distance transmission, the penetration of optical solutions will gradually increase as speeds rise. Future connectors may increasingly integrate with optical communication technologies, forming hybrid optoelectronic connection solutions.
