According to our (Global Info Research) latest study, the global Internet of Things Insect Detection Lamp market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The Internet of Things Insect Detection Lamp is an intelligent agricultural device based on Internet of Things technology, which is used to detect, identify and monitor crop pests and diseases. Through built-in sensors and image recognition algorithms, the device can automatically acquire and analyze data around crops, such as temperature, humidity, soil pH, etc., and upload these data to Internet servers in real time. When crop diseases and pests are detected, the device will send out an alarm and push notifications to the user, so that effective measures can be taken in time to protect the growth of crops and reduce losses. Insect forecasting lights have the advantages of intelligence, high efficiency and real-time performance, and are widely used in modern agricultural production.
