The global Internet of Things Insect Detection Lamp market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Internet of Things Insect Detection Lamp is an intelligent agricultural device based on Internet of Things technology, which is used to detect, identify and monitor crop pests and diseases. Through built-in sensors and image recognition algorithms, the device can automatically acquire and analyze data around crops, such as temperature, humidity, soil pH, etc., and upload these data to Internet servers in real time. When crop diseases and pests are detected, the device will send out an alarm and push notifications to the user, so that effective measures can be taken in time to protect the growth of crops and reduce losses. Insect forecasting lights have the advantages of intelligence, high efficiency and real-time performance, and are widely used in modern agricultural production.
