The global Internet of Things (IoT) Security market size is expected to reach \$ 112290 million by 2032, rising at a market growth of 19.1% CAGR during the forecast period (2026-2032).

IoT security is the area of endeavor concerned with safeguarding connected devices and networks in the Internet of things (IoT).

Development Trends: In the future, IoT security will evolve toward greater intelligence and reliability. On one hand, artificial intelligence algorithms will be widely applied in areas such as intrusion detection, malware detection, and anomaly behavior analysis, enabling automatic identification and prediction of potential security threats. On the other hand, the zero-trust security model will gain broader adoption, ensuring that only devices and users that have undergone rigorous verification can access IoT resources. Meanwhile, governments and relevant organizations worldwide will continue to drive the development and refinement of IoT security standards, providing a more robust foundation for IoT security.
