## Abstracts

According to our (Global Info Research) latest study, the global Internet of Things Kitchen Ecosystem market size was valued at US\$ 974 million in 2025 and is forecast to a readjusted size of US\$ 1801 million by 2032 with a CAGR of 9.3% during review period.

An IoT kitchen ecosystem refers to connecting kitchen equipment, food management devices, environmental sensors, and cloud data platforms through IoT technology to form a smart kitchen system that is perceptive, interconnected, and collaborative. It can monitor data such as temperature, humidity, fumes, electricity and water consumption, and safety status in real time, and enable automatic linkage between devices such as refrigerators, stoves, dishwashers, and storage cabinets. This includes automatic adjustment of heat, anti-dry-burning features, intelligent replenishment, energy optimization, and food shelf-life management, thereby improving cooking efficiency, food safety, energy management, and the overall kitchen experience.

The core value of the IoT kitchen ecosystem is evolving from the intelligentization of individual devices to a data-centric holistic operational system. In restaurant chains, central kitchens, and catering scenarios, stoves, steaming and grilling equipment, refrigeration and freezing systems, fume treatment, and energy consumption systems are uniformly connected to an IoT platform, enabling real-time monitoring of food safety, energy efficiency, and equipment operating status. These systems are no longer merely 'networked collections of kitchen equipment,' but are gradually becoming the 'digital hub' of kitchen operations, helping operators reduce energy consumption, decrease reliance on manual labor, and improve product stability and compliance through standardized processes. Their value is particularly evident in large chains and large-scale catering

systems.

From a market evolution perspective, the competitive focus of the IoT kitchen ecosystem is shifting from hardware sales to platform stickiness and service capabilities. Manufacturers with integrated capabilities in equipment, software, and operation and maintenance services are more likely to build long-term customer relationships through data accumulation and subsequently expand into value-added services such as energy management, predictive maintenance, food safety traceability, and financial services. As the catering industry becomes more digitalized and regulatory requirements become stricter, the IoT kitchen ecosystem is expected to evolve from an 'optional configuration' to the infrastructure of medium and large catering enterprises. Its business model will also gradually shift from one-time equipment revenue to a subscription-based, service-oriented, and data-driven revenue structure.
