Abstracts

According to our (Global Info Research) latest study, the global Internet Ticket Vending Machine market size was valued at US\$ 606 million in 2025 and is forecast to a readjusted size of US\$ 814 million by 2032 with a CAGR of 4.5% during review period.

In 2025, global sales of Internet Ticket Vending Machine reached approximately 31,000 units, with an average market price of about USD 19,000 per unit, an annual production capacity of roughly 36,000 units, and an industry-average gross margin of approximately 33%.

An Internet Ticket Vending Machine is generally a network-connected self-service ticketing terminal linked to a central ticketing or AFC (automatic fare collection) system. It is mainly used in metro, rail, and light-rail environments and typically supports cashless ticket purchase, recharge, ticket inquiry, intelligent customer service, and voice interaction; in more complete configurations, it can also support paper magnetic tickets or QR-code ticket output, ID recognition, and card/ticket handling, making it a front-end device within public transport self-service fare collection systems.

Upstream suppliers mainly provide sheet-metal cabinets, industrial PCs, touch displays, QR/barcode/NFC/ID reading modules, thermal printing modules, ticket/card dispensing and recycling modules, banknote and coin recognition/recycling modules, and communication and power modules. Midstream consists of OEMs and AFC system integrators that handle structural design, hardware-software integration, payment and back-office ticketing connectivity, final assembly, and after-sales maintenance. Downstream demand comes primarily from metro, railway, light rail, BRT, and airport operators, and can also extend to scenic attractions and venues that need connected

self-service ticketing infrastructure.
