The global Interventional Devices for Structural Heart Disease market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Structural heart disease refers to physical and physiological changes in the heart caused by abnormalities in heart tissue or valves. Many structural heart diseases are congenital, and some structural heart disease develops later in life. There are three types of treatment for structural heart disease: drug therapy, transcatheter intervention, and open-heart surgery. Structural heart disease interventional devices are used in interventional therapy. Common interventional devices include congenital heart disease occluders, cardiogenic stroke occluders and heart valve products.
