Abstracts

According to our (Global Info Research) latest study, the global Interventional Oncology Microspheres market size was valued at US$ 666 million in 2025 and is forecast to a readjusted size of US$ 981 million by 2032 with a CAGR of 5.7% during review period.

In 2025, global interventional oncology microspheres average price is 1260 usd/unit.

Interventional Oncology Microspheres are sterile, size-calibrated spherical particles delivered through angiographic catheters or microcatheters into arteries supplying solid tumors. The products are designed to achieve one or more locoregional therapeutic functions: mechanical occlusion of tumor-feeding vessels, controlled local delivery of chemotherapeutic agents, or deposition of therapeutic radioisotopes within tumor microvasculature. The market principally covers bland embolization microspheres, drug-loadable or drug-eluting microspheres, resorbable or biodegradable microspheres, radiopaque or otherwise imageable microspheres, and radioactive microspheres based on isotopes such as yttrium-90. Product structures include cross-linked hydrogel, polyvinyl alcohol, polyethylene glycol, acrylic copolymer, degradable starch, biodegradable polymer, resin and glass microspheres. Interventional Oncology Microspheres are primarily used in transarterial embolization, transarterial chemoembolization and transarterial radioembolization for hepatocellular carcinoma, liver metastases and other hypervascular tumors, with product selection determined by tumor vascularity, target-vessel anatomy, treatment objective and approved indication.
