According to our (Global Info Research) latest study, the global Intervertebral Disc Implant market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Artificial lumbar discs are made of metal and plastic and are very similar to the artificial implants used in successful cervical disc replacements, hip and knee replacements. This design is mainly to reduce friction, so that patients can reduce energy consumption and wear during activities. It allows the patient to flex 20 degrees forward and backward, 10 degrees left and right and 5 degrees of autorotation. Unlike spinal fusion, modern designs of artificial lumbar discs closely approximate normal biomechanics.
