Abstracts

The global Intervertebral Disc Implant market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Artificial lumbar discs are made of metal and plastic and are very similar to the artificial implants used in successful cervical disc replacements, hip and knee replacements. This design is mainly to reduce friction, so that patients can reduce energy consumption and wear during activities. It allows the patient to flex 20 degrees forward and backward, 10 degrees left and right and 5 degrees of autorotation. Unlike spinal fusion, modern designs of artificial lumbar discs closely approximate normal biomechanics.

This report studies the global Intervertebral Disc Implant production, demand, key manufacturers, and key regions.
