## Abstracts

According to our (Global Info Research) latest study, the global Intralogistics Robots market size was valued at US\$ 7799 million in 2025 and is forecast to a readjusted size of US\$ 25622 million by 2032 with a CAGR of 18.5% during review period.

In 2025, global intralogistics robot output reached roughly 420,000 units, backed by global production capacity of about 620,000 units, with average unit price USD 18,000, and industry-wide gross margins stand near 36%. Intralogistics Robots are autonomous or semi-autonomous robotic systems—such as Autonomous Mobile Robots (AMRs), Automated Guided Vehicles (AGVs), robotic picking arms, and palletizing robots—used inside warehouses, factories, and distribution centers to move, sort, pick, and stage goods with minimal human intervention, enabling faster order fulfillment, higher space utilization, and data-driven operations. Their supply chain begins upstream with core components including LiDAR and vision sensors, industrial cameras, motor drives, batteries, controllers, and embedded AI chips; midstream with OEMs that integrate hardware, navigation software, fleet management systems, and safety modules into complete robotic platforms; and downstream with system integrators and software vendors that deploy robots into warehouse management systems (WMS), manufacturing execution systems (MES), and e-commerce fulfillment networks for end users in retail, e-commerce, 3PL logistics, manufacturing, pharmaceuticals, and food & beverage.
