Abstracts

According to our (Global Info Research) latest study, the global Intranet Security Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

In the traditional network security threat model, it is assumed that all personnel and equipment in the intranet are secure and credible, while the external network is insecure. Based on this assumption, the security solutions of external network, such as anti-virus software, firewall, IDS and so on, are produced. Due to the lack of effective technical means, the relevant network authorities can not form a sound management mechanism, which makes the enterprise's intranet management in a long-term passive management situation, and the ability to deal with information network security incidents quickly is weak.

The Global Info Research report includes an overview of the development of the Intranet Security Software industry chain, the market status of Network Security (Internet Monitoring Audit, Desktop Security Management), Data Security (Internet Monitoring Audit, Desktop Security Management), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Intranet Security Software.
