Abstracts

The global Intraoperative MRI market size is expected to reach \$ 107 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Intraoperative magnetic resonance imaging (iMRI) refers to an operating room configuration that enables surgeons to image the patient via an MRI scanner while the patient is undergoing surgery, particularly brain surgery. iMRI reduces the risk of damaging critical parts of the brain and helps confirm that the surgery was successful or if additional resection is needed before the patient's head is closed and the surgery completed.

GE, Siemens, Phillips, Medtronic, Hitachi, etc are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry. There are high technical barriers for the new entrants.

North America is the largest consumption place, with a consumption market share nearly 46%. Following North America, Europe is the second largest consumption place with the consumption market share of 27%. For China and other region, only several hospitals install the equipment because of the high price.

The classification of Intraoperative MRI includes 0.2T, 1.5T and 3.0T, and the proportion of 3.0T about 38%.

Intraoperative MRI is widely used in neurosurgery surgery, spinal surgery, orthopedic surgery and other field. Intraoperative MRI is widely used for neurosurgery surgery, and the proportion is about 57%.

This report studies the global Intraoperative MRI production, demand, key manufacturers, and key regions.
