Abstracts

Intraoral digital cameras are specialized dental imaging devices used to capture high-resolution images of the inside of a patient's mouth. These cameras are specifically designed for use in dentistry and provide detailed visual documentation for diagnostic, treatment planning, and patient education purposes.

Just a tad longer than the size of a pen, an intraoral camera has a tiny lens fitted on its tip. The intraoral camera is connected to the dentist's computer and when it is moved around inside the mouth, it captures images that can be transmitted to the computer and can be seen by both, the patient and the dentist.
