According to our (Global Info Research) latest study, the global Intruder Detection Devices market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Intruder detection is defined as a process of recognizing something or someone in an area, which is under observation. The intruder detector observes the human at every location to constantly monitor the entire area of the coverage.

The current intrusion detection systems thus combine the technologies that afford a high level of detection using cost-effective methods and equipment. The traditional intruder detection devices focus on the incursion from the outside, i.e., around the perimeter of the space. But it is essential to detect the intrusion not only from the external events but also from the internal events, which are occurring inside the boundaries.
