Intrusion Detection and Prevention Systems (IDPS) are network security appliances that monitor network and system activities and detect possible intrusions. They can also prevent intrusions by blocking or stopping the activity, log information about it, and report it. IDPS can use various methods to detect intrusions, such as signatures, anomalies, protocols, advanced threat defense, and threat intelligence. IDPS can be classified into different types based on their deployment location, such as network, host, or protocol-based.

The industry trend of IDPS products is expected to grow in the post-COVID-19 scenario due to the increasing number of security breaches and cyberattacks, the changing cyber landscape, and the growing need for compliance with various regulations. The market is also influenced by the emergence of next-generation IDPS solutions that can cope with advanced targeted threats that can evade traditional IDPS solutions.
