The global Intubation Cannula for Tracheostomy market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Intubation Cannula for Tracheostomy is a medical device used for tracheal intubation and is one of the important components of tracheal intubation. It is a hollow tube for insertion into the patient's airway, connected to the endotracheal tube body, and fixed in the correct position through the sleeve. The main function of the intubation sleeve is to ensure the fixation and stability of the tracheal intubation and prevent the endotracheal intubation from falling off or shifting during use. In addition, the tracheostomy intubation sleeve can also reduce the irritation and damage to the tracheal mucosa caused by endotracheal intubation, and improve the safety and comfort of endotracheal intubation.
