Abstracts

Inulin is a slightly sweet carbohydrate that has certain beneficial properties. It is classified as a fiber because it passes through the digestive tract without being metabolized until it reaches the colon. Unlike cellulose fiber (bran etc.) it is a soluble fiber. Inulin comes from a natural source and occurs in a large variety of plants, where it plays an important biological role as reserve carbohydrate. Inulin has been part of our daily diet for hundreds of years, as you find it in many fruits and vegetables, such as bananas, onions, and wheat. When extracted from chicory roots, inulin can be successfully used as a beneficial ingredient in many food applications.
