According to our (Global Info Research) latest study, the global Invasive Species Management and Control Service market size was valued at US\$ 210 million in 2025 and is forecast to a readjusted size of US\$ 277 million by 2032 with a CAGR of 4.0% during review period.

Invasive species management and control services refer to the systematic efforts and techniques employed to mitigate the negative impacts of invasive species on ecosystems, biodiversity, agriculture, infrastructure, and human health. These services encompass a range of strategies aimed at preventing the introduction, detecting early infestations, and effectively controlling established invasive species populations. Invasive species management and control services play a crucial role in safeguarding natural resources, supporting sustainable agriculture, protecting infrastructure, and preserving biodiversity against the threats posed by invasive species. Effective management requires a comprehensive and integrated approach tailored to the specific characteristics of invasive species and the ecosystems they impact.

Strengthened global biosecurity policies, growing ecological protection awareness, and mounting economic losses from alien invasive species fuel the development of Invasive Species Management and Control Service, with digital monitoring, eco-friendly biological control and precise targeted intervention becoming mainstream industry trends; prominent opportunities come from government-driven ecological restoration projects, agricultural and forestry risk prevention, cross-border quarantine requirements and urban wetland governance demands, while the industry faces persistent challenges such as wide species distribution ranges, high long-term governance costs, evolving pest resistance, and inconsistent regional technical standards and supervision systems.
