According to our (Global Info Research) latest study, the global Inventory Tag System market size was valued at USD 4846.9 million in 2023 and is forecast to a readjusted size of USD 6175.7 million by 2030 with a CAGR of 3.5% during review period.

An inventory tag system consists of wireless computer, barcode scanner, industrial PC, barcode printer and a software. These systems are used to manage the complete lifecycle of particular product, track their location for ensuring that assets are not missing or stolen. A tag is a label attached to a product for providing identification details of the products. Every product offered to the consumers comes with a unique tag. The inventory tag is also used to identify the variety of a product. An inventory tracking system aids in purchasing process, forecasting the sales and preventing theft from employees or customers. In line with this, efficient management of the inventory is a key factor to reduce the demand-supply gap and minimize losing out on customers. Efficient management of inventory further reduces the transportation costs and uneconomical overstock.

Efforts towards standardization, rapid industrialization across the globe, stringent regulations towards packaging by the regulatory bodies, assurance to consumers about the product, increase in security measures against theft are the major factors that drive the growth of the market. However, lack of knowledge about the technology and dearth of skilled workers restrain the market growth.

The Global Info Research report includes an overview of the development of the Inventory Tag System industry chain, the market status of Industrial (Paper, Plastic), Retail (Paper, Plastic), and key enterprises in developed and developing market, and
