According to our (Global Info Research) latest study, the global Inventory Tank Gauging System market size was valued at USD 656.3 million in 2023 and is forecast to a readjusted size of USD 803.2 million by 2030 with a CAGR of 2.9% during review period.

Inventory tank gauging systems are used to measure the level of liquid contained inside a tank. There are two types of tank gauging systems-point level instruments and continuous level instruments. Honeywell International, Schneider Electric, and Emerson are some of the key players in the inventory tank gauging system market.

Growth of the chemical and petrochemical industries is expected to fuel the market since it helps measure bulk liquids in storage tanks. Chemical manufacturing requires a complex series of processes such as condensing, cooling, and heating for evaporation and separation. However, the exposure of inventory tank gauging instruments in extreme climatic conditions is expected to restrict the market growth. Moreover, increasing uses of radar level transmitters in various industry verticals such as oil & gas, marine, chemical, and others provide ample growth opportunities since it is used to detect continuous level measurement applications.

The Global Info Research report includes an overview of the development of the Inventory Tank Gauging System industry chain, the market status of Aviation (Point Level Instruments, Continuous Level Instruments), Defense (Point Level Instruments, Continuous Level Instruments), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Inventory Tank Gauging System.
