Abstracts

Inventory tracking system provides a detailed information on every asset throughout the off-line and finished goods processes, and creates a complete history of every asset required by the manufacturers, distributors, and service organizations. Several industries including retail, manufacturing, agriculture, automotive, and others implement inventory tracking system for efficient movement and tracking of their service goods across the warehouse and inventory centers.

The global inventory tracking system market is expected to register substantial growth in the near future, attributed to rise in standardization, rapid industrialization across several developed as well as developing regions including North America, Europe, and Asia-Pacific. In addition, increase in security measures against theft of goods and raw material in several industries, such as manufacturing, retail, and consumer goods fuel the market growth. However, complex integration and lack of IT infrastructure are expected to restrain the growth of the market.
