North America is the largest market, with a share about 34%, followed by Asia-Pacific and Europe, with the share about 32% and 30%. In terms of product type, Biological Inverted Microscope occupy the largest share of the total market, about 45%. And in terms of product Application, the largest application is Hospital, followed by University.

An inverted microscope is a type of light microscope that is designed to be used with the sample mounted above the objective lens, as opposed to the traditional upright microscope where the sample is placed on a stage below the objective. The inverted design allows for easier observation and manipulation of samples in liquid media or other applications such as cell culture dishes, petri plates, and microtiter plates.
