According to our (Global Info Research) latest study, the global Inverter Refrigerator Control Board market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

This report mainly studies the control board of the inverter refrigerator. The refrigerator electric control panel is the 'brain' of the refrigerator, controlling the compressor, fan and other main components. When the electric control board of the refrigerator fails, the refrigerator cannot cool normally. If the control panel relay of the starting compressor fails, it will not cool at all, which is the most common problem of the refrigerator control panel (other faulty components can prevent the operation of the control panel, such as the starting device or overload fuse).
