According to our (Global Info Research) latest study, the global Invisible Fingerprint Technology market size was valued at US\$ 2382 million in 2023 and is forecast to a readjusted size of USD 3283 million by 2030 with a CAGR of 4.5% during review period.

Invisible fingerprint technology is an innovative biometric solution that seamlessly integrates the fingerprint sensor under the surface of the device, making the sensor itself invisible, thereby improving the device's aesthetics and user experience. The under-screen optical invisible fingerprint technology uses the self-luminous properties of the OLED screen. When the user presses a specific area of the screen with a finger, the screen emits light to illuminate the fingerprint. The reflected light is captured by the optical sensor below the screen substrate and processed into a fingerprint image.
