Abstracts

According to our (Global Info Research) latest study, the global IO-Link Hub market size was valued at US\$ 1477 million in 2024 and is forecast to a readjusted size of USD 2630 million by 2031 with a CAGR of 8.7% during review period.

IO-Link hubs allow several digital sensors and actuators to be connected to an IO-Link master via a standard sensor cable. Intended for basic field I/O signals (no IO-Link diagnostic information), these hubs are an economical solution for a high-quality decentralized installation.

According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence technology. The steady growth of application demand and the accelerated development of the new energy vehicle market can offset the decline in some consumer markets and provide support for long-term demand growth.
