Abstracts

Iodine antibacterial wound dressing is a medical product used to treat trauma or wounds at risk of infection. This dressing contains iodine, which has antibacterial and antiseptic properties and helps prevent and treat wound infections. Iodine antimicrobial dressings usually come in different forms, such as bandages soaked in iodine solution, iodine gel dressings, or dressing coatings containing iodine. These dressings are applied directly to the wound and release iodine, killing bacteria and promoting wound healing. The use of iodine antibacterial wound dressings should be based on the doctor's advice and the appropriate type and method of use should be selected based on the nature and severity of the wound.
