Abstracts

The global Iodopyridines market size is expected to reach \$ 80.87 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032). Iodopyridines are a family of nitrogen-containing heteroaromatic compounds derived from pyridine, in which one or more ring hydrogen atoms are replaced by iodine. The most common members are the three monoiodinated isomers?2-iodopyridine, 3-iodopyridine and 4-iodopyridine?which are typical heteroaryl iodides and behave as highly reactive aryl iodides in cross-coupling chemistry.

Key upstream materials include pyridine and aminopyridines, iodine and iodinating agents (I₂ with oxidants, KI/I₂ systems), nitrite for diazotization, acids such as p-toluenesulfonic acid or sulfuric acid, and typical organic solvents and catalysts.

Downstream, iodopyridines act as highly reactive heteroaryl iodide building blocks in cross-coupling chemistry and as key intermediates across several value chains.

In 2025, global sales of iodopyridines reached approximately 1,905 tons, with an average global market price of around US\$ 26/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 50%.

This report studies the global Iodopyridines production, demand, key manufacturers, and key regions.
