Abstracts

According to our (Global Info Research) latest study, the global Iodopyridines market size was valued at US\$ 50.96 million in 2025 and is forecast to a readjusted size of US\$ 80.87 million by 2032 with a CAGR of 6.7% during review period.

Iodopyridines are a family of nitrogen-containing heteroaromatic compounds derived from pyridine, in which one or more ring hydrogen atoms are replaced by iodine. The most common members are the three monoiodinated isomers?2-iodopyridine, 3-iodopyridine and 4-iodopyridine?which are typical heteroaryl iodides and behave as highly reactive aryl iodides in cross-coupling chemistry.

Key upstream materials include pyridine and aminopyridines, iodine and iodinating agents (I₂ with oxidants, KI/I₂ systems), nitrite for diazotization, acids such as p-toluenesulfonic acid or sulfuric acid, and typical organic solvents and catalysts. Downstream, iodopyridines act as highly reactive heteroaryl iodide building blocks in cross-coupling chemistry and as key intermediates across several value chains.

In 2025, global sales of iodopyridines reached approximately 1,905 tons, with an average global market price of around US\$ 26/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 50%.
