Abstracts

The global IOL Technologies market size is expected to reach \$ 6302.2 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

An intraocular lens (or IOL) is a tiny, artificial lens for the eye. It replaces the eye's natural lens that is removed during cataract surgery. IOLs come in different focusing powers, just like prescription eyeglasses or contact lenses. Most IOLs are made of silicone, acrylic, or other plastic compositions. They are also coated with a special material to help protect your eyes from the sun's harmful ultraviolet (UV) rays. An ophthalmologist measures the length of eye and the curve of cornea to set the focusing power of the IOLs.

This report studies the global IOL Technologies demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for IOL Technologies, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2022 as the base year.
