According to our (Global Info Research) latest study, the global Ion Beam Etching System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Ion beam etching system (IBE, Ion Beam Etching) is a high-precision nano-processing technology that uses high-energy ion beams to bombard the surface of materials, causing material atoms to sputter and then achieve etching. Ion beams are usually formed by filling inert gases such as Ar, Kr or Xe and ionizing them, and then extracted and accelerated through the gate to form ion beams with a certain energy.

Ion beam etching systems usually consist of ion sources, vacuum systems, reaction chambers, gas path systems, and water cooling systems. Technical indicators include ion source aperture, effective ion beam diameter, ion beam current density, ion energy, vacuum system performance, reaction chamber dimensions, gas path system configuration, etc.
