## Abstracts

According to our (Global Info Research) latest study, the global Ion Beam Thinning Instrument market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Ion beam thinning instrument is a precision equipment used to prepare ultra-thin sections or films of materials. It uses a focused beam of ions (charged particles) to selectively remove layers of material from a sample. The process is commonly used in materials science, electronics, microscopy, and other fields to obtain thin samples for analysis, including transmission electron microscopy (TEM). By precisely controlling the energy and trajectory of the ion beam, the instrument is able to precisely thin samples while maintaining their structural integrity and surface quality.
