Abstracts

The global Ion Exchange Resin System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ion exchange resin system is a traditional water treatment process that replaces various anions and cations in water through anion and cation exchange resins. Anion and cation exchange resins can be combined alone or in different proportions to form an ion exchange bed system. Exchange shade bed system and ion exchange mixed bed system, and the mixed bed system is usually used to produce ultrapure water and high-purity water terminal process after reverse osmosis and other water treatment processes. It is used to prepare ultra-pure water and high-purity water. One of the irreplaceable means. The conductivity of the effluent water can be lower than 0.2?S/cm, and the resistivity of the effluent water can reach more than 5M?-cm. According to different water quality and use requirements, the resistivity of the effluent water can be controlled between 5~18M?-cm. It is widely used in the preparation of ultra-pure water and high-purity water for electronics, ion exchange resin systems, boiler feed water and other industrial and pharmaceutical ultra-pure water.
