The global Ion Exchange Resins for Power Plants market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ion exchange resins for power plants are materials that can remove or exchange ions from water or other liquids used in power generation systems. They are usually composed of organic polymer beads or membranes that have functional groups that can attract and release specific ions. Ion exchange resins can help improve the water quality, efficiency, and reliability of power plants by reducing the hardness, acidity, alkalinity, conductivity, and impurities of the water. They can also help prevent corrosion, scaling, fouling, and contamination of the power plant equipment and pipes.
