## Abstracts

According to our (Global Info Research) latest study, the global Ion Selective Permeable Membrane market size was valued at USD 945.9 million in 2023 and is forecast to a readjusted size of USD 1303.7 million by 2030 with a CAGR of 4.7% during review period.

Ion-exchange membranes transport dissolved ions across a conductive polymeric membrane. The membranes are often used in desalination and chemical recovery applications, moving ions from one solution to another with little passage of water.

Ion-exchange membranes are made of a polymeric material attached to charged ion groups. Anion-exchange membranes contain fixed cationic groups with predominantly mobile anions; because anions are the majority species, most of the conductivity is due to anion transport. Cation-exchange membranes contain fixed anionic groups with predominantly mobile cations; because cations are the majority species, most of the conductivity is due to cation transport.

The permselectivity of ion-exchange membranes describes their charge selectivity. This charge selectivity reflects the membrane's ability to discriminate between ions of opposite charge. A higher selectivity leads to increased recovery and performance of the membrane.

Global Ion Selective Permeable Membrane main players are DuPont, Asahi Kasei, Asahi Glass, Solvay, etc. Global top four manufacturers hold a share over 90%. North America is the largest market, with a share nearly 45%.
