Abstracts

According to our (Global Info Research) latest study, the global Ionic Gel Electrolyte market size was valued at US\$ 429 million in 2025 and is forecast to a readjusted size of US\$ 1293 million by 2032 with a CAGR of 17.0% during review period.

Ionic gel electrolyte is a semi-solid electrolyte formed by immobilizing a liquid electrolyte—typically a lithium salt dissolved in organic solvents or ionic liquids—within a polymer or inorganic gel matrix, combining the high ionic conductivity of liquids with the mechanical stability, safety, and leakage resistance of solids. Its supply chain starts upstream with electrolyte salts (e.g., lithium salts), solvents or ionic liquids, polymer matrices (such as PVDF-based, PEO-based, or cross-linked networks), and functional additives; moves through midstream formulation and gelation processes including polymer synthesis, solvent mixing, salt dissolution, cross-linking, and rheology control; and ends downstream with integration into batteries, supercapacitors, and flexible or solid-state energy-storage devices, followed by cell assembly, testing, and qualification for applications in EVs, consumer electronics, and emerging wearable or solid-state systems. In 2025, global ionic gel electrolyte production reached approximately 28,000 tons, while total installed capacity stood at around 42,000 tons annually. Average selling prices ranged between USD 13,000 and 25,000 per ton, with industry gross margins of roughly 34%.
