Abstracts

Ionizing Nozzles can quickly and efficiently remove dust and static charges to help support manufacturing operations that require clean room environments.

Ionizing Nozzles is the ideal technique of removing static, contaminants and dust from three-dimensional parts before assembling, packaging, painting or finishing. The ion air nozzle neutralizes the static electricity and cleans at distances up to 2 feet. When ordinary compressed air is used to remove dust and air nozzle for cleaning purpose, its efficiency gets reduced. In case the static charge, which holds the dust to the product is not neutralized, both the product and the dust will remain statically charged and capable of re-contamination
