According to our (Global Info Research) latest study, the global Ionomer Resin market size was valued at USD 772.2 million in 2022 and is forecast to a readjusted size of USD 979.5 million by 2029 with a CAGR of 3.5% during review period.

Ionomer Resin is a polymer that comprises repeat units of both electrically neutral repeating units and a fraction of ionized units (usually no more than 15 mole percent) covalently bonded to the polymer backbone as pendant group moieties. This means that most Ionomer Resins are copolymers of the neutral segments and the ionized units, which usually consist of carboxylic acid groups. The classification of a polymer as an Ionomer Resin depends on the level of substitution of ionic groups as well as how the ionic groups are incorporated into the polymer structure. Ionomer Resins have unique physical properties including electrical conductivity and viscosity—increase in Ionomer Resin solution viscosity with increasing temperatures. Ionomer Resins also have unique morphological properties as the non-polar polymer backbone is energetically incompatible with the polar ionic groups. As a result, the ionic groups will microphase separate into ionic-rich domains in most Ionomer Resins.

Global key players of Ionomer Resin include Dow, Kuraray and DuPont, etc. The top three players hold a share over 50%. North America is the largest market, has a share about 35%. In terms of product type, EAA Copolymers is the largest segment, occupied for a share of about 40%, and in terms of application, Ion Exchange Membrane has a share about 30 percent.
